FEATURES

Overload precaution lamp

The warning lamp begins to flash when the output current exceeds 80% of the rated capacity, alerting the user to potential overload.

Low noise

Minimal operating noise with a top-class low noise level. Ideal for communication and reducing worker fatigue at worksites.

Dual fuel filtration

A fuel filter and a water separator with enhanced removal capability—effectively eliminating water, sand, and dust to reduce maintenance needs.

Robust alternator

In-house designed and manufactured brushless alternator ensures reliable performance, even in sandy, dusty, and extreme heat condition.

Powered by

Reliable engine ISUZU

ISUZU 4BG1T is a turbocharged diesel engine known for its strong performance, reliability, and efficiency in demanding industrial applications.

Phase Overload Protection

Current detection is performed on all three phases: R, S, and T - enabling overcurrent protection for R-O, S-O, T-O, and even S-T outputs. This ensures reliable protection regardless of where the load is connected in the three-phase system.
